VARIETY OF CHOICES

The surface treatment requires skilled craftsmanship. Carefully selected, the semi-transparent appearance of our stain finishes preserve the natural structure of the bamboo, creating a beautiful finish to accentuate the bamboo grain's natural beauty. Stain finish colors, Caviar, Sable, Java, Ruby, and Black Walnut bring a new look to sustainable products to meet your commercial project needs.

MECHANICAL FINISHES

These color choices are created through a natural process that works in harmony with the bamboo. Amber, Wheat, and Caramelized are not stain finishes, simply an innovation using earth friendly heat, steam, and pressure to transform the solid bamboo material into deep vibrant colors, creating

WHY BAMBOO

- FAST GROWING
  Grows to harvestable maturity in 5 years or less.
- RAPIDLY RENEWABLE
  Replenishes itself faster than other wood materials.
- SELF PROPAGATING
  No need to replant, roots left intact to grow next season.
- CARBON SEQUESTRATION
  Bamboo is among the most efficient CO2 absorbers on Earth.
- RELEASES OXYGEN
  Bamboo releases about 35% more oxygen than trees.
- LOCAL FARMERS
  Locally owned and managed within close proximity.
- NATURALLY FARMED
  Without the use of pesticides, fertilizers, or irrigation.
- HAND HARVESTED
  No heavy equipment is used, leaving forest floor intact.
- ZERO WASTE
  Entire bamboo culm is used, wasting nothing.

Bamboo is an environmentally friendly, renewable resource harvested from sustainable and rapidly growing forests. Each bamboo culm used is individually selected and hand harvested. No heavy equipment is brought into the bamboo forests to damage the integrity of the forest floors. Unlike trees which get harvested, the rhizome roots of bamboo live to produce more shoots. Because the bamboo doesn't die, it does not release its sequestered carbon like a tree does after it is cut down.

5 Years

Greenington furniture is manufactured using only mature Moso bamboo at least 5 years old, ensuring maximum strength and durability for our products.

Main

GREENINGTON

Information

Environmentally Sustainable: Bamboo is one of the earth's fastest growing plants, a grass that grows to maturity in 5 years or less. Our bamboo is harvested from the managed forests of a fully sustainable, environmentally friendly and rapidly growing renewable resource.

Bamboo reduces the atmospheric concentration of carbon dioxide, which is the main contributor to reduce global warming. Bamboo releases about 35% more oxygen than equivalent stands of trees making it one of the best plants on earth to sequester carbon.

Our bamboo material has been treated and kiln dried to a specific moisture content, then put through our special manufacturing process to produce the bamboo materials we use. The VOC emissions of the adhesive used in manufacturing our products are well below allowable European, US and California standards.

Advantages

Of our furniture

Hardness: Greenington furniture uses only mature Moso bamboo that is at least 5 years old ensuring that our furniture possesses strength, hardness and stability. Our Classic bamboo is 20% harder than Oak, and our Exotic bamboo is 100% harder than Red Oak.

High Quality: From processing the raw bamboo material into solid stock and panels, we make the final product in our ISO 9001 and ISO 14001 certified factories under tight quality control.

Variety of Choices: We offer a wide selection within our Classic Bamboo Collections, featuring our standard laminated panels in a natural Amber, Caramelized, and Wheat finishes, along with Caviar, Ruby, Black Walnut, Java and Sable stain finishes.

Leadership: With over 20 years experience manufacturing bamboo products, Greenington is the leading company in mid to high end bamboo furniture production. Our processes are innovative, using the latest developed technologies to create new product lines.

Frequently Asked Questions

About your new bamboo furniture

What kind of bamboo is used in Greenington Furniture?
There are more than 1200 bamboo species throughout the world. Greenington only uses mature Moso bamboo (Phyllostachys pubescens), valued for its hardness, durability and stability. And pandas do not feed on Moso bamboo, which is extremely important.

Is there off-gassing to be concerned about with the adhesives used?
The adhesives used in manufacturing our products have very low off-gas emissions. The formaldehyde gas levels are well below the European, US, and including California VOC standards.

What is the difference between Classic Bamboo and Exotic Bamboo?
Our Classic Bamboo material is laminated from square edged bamboo slats under specific pressure and temperature into stock and panel material. (20% harder than Oak.) Our Exotic Bamboo material is made by fusing thin bamboo strips under very high pressure into our stock and panel material. (100% harder than Red Oak.)

Caramelized, Amber, Wheat, and Exotic Bamboo: These color choices are created through a natural process that works in harmony with the bamboo. Amber and Ruby are not stain finishes, simply an innovation using earth friendly heat, steam, and pressure to transform the solid bamboo material into vibrant colors. Variations are expected in grain and color and enrich the natural beauty of bamboo furniture.

Is your furniture 100% bamboo?
Yes, all Greenington bamboo furniture is made of 100% bamboo with no added filler, fiberboard, MDF or other materials.

Where are your products made?
All Greenington bamboo furniture is made in our ISO 9001 Quality Management and ISO 14001 Environment Management certified factories in China.

How do I care for and maintain the bamboo furniture?
Periodic cleaning can be done using a soft cloth and a gentle cleaner designed for wood furniture. Please visit greenington.com for more detailed instructions.

Go with Bamboo...
Live with Sustainability

Greenington craftsmanship is excellence, beauty, and durability. It's about the ability to create something elegant and high-quality that delivers value. We take the time to make sure each piece is beautiful, performs what it was designed for, and make sure that every detail is carefully attended.

Our bamboo products are made from solid strips of the bamboo culm which are put into large steamers which 'cook' the sugars in the bamboo, producing a caramelized color. The finished strips are laminated into solid bamboo stock and panels of various sizes and thicknesses from which our collections are produced.

From processing raw bamboo material into panels, to the making of all Greenington products, everything takes place under tight quality control, meeting international standards.
